

WYXT introduces a new micro TAG inside the WYXT watches. Only 16x30 mm! Unique product that meets all requirements of the market that is becoming more and more challenging and demanding, and places great emphasis on feasibility of introducing RFID tags in reduced spaces. High precision of etching process guarantees excellent performance of the new WATCH TAG.

The TAG is based on a copper antenna etched on a layer of PET substrate.

It is currently available with a chip PHILIPS I CODE 1 SLI SL2 ICS20, ISO 15693 at 13,56Mhz compatible.

Introduction of the new micro tag inside WYXT watches reading distances up to 30 cm WYXT is an important brand known for satisfaction it gives to anyone who wishes to use the best technology available in the watch sector, as demonstrated by the watches with the MP3 function (128 Mb) and those with USB Memory (32-512 Mb).

The latest product realised by WYXT is the Watch Tag, the only with transponder and digital functions.

Another crucial characteristic is high resistance to water; in fact Watch Tag resists up to 5 atmospheres, equal to 50 meters.

Currently there are two models available, ST and PR both with the following functions:

- > EL backlight
- > chronograph 1\100
- > dual alarm
- > hour, minute, second (format 12/ 24 hours)
- > calendar ; day, month and day of week
- > chime
- > dual time
- > countdown – timer
- > chronograph with 5 memories
- > jumbo display

All of the WYXT watches use long duration lithium batteries (approx. 6 years of normal use) and are covered by 24 month warranty.
